Excerpt: .of the dynamical wave theory, which now is shown to explain all the known phenomena of the tides in every ocean of the globe. (6) And as this wave theory explains the eddies on known hydrodynamical principles, this triumph gives a vastly increased probability to Laplace s theory of the tides, in which we treat the waters, not only as in motion but also as oscillating in periods coperiodic with the forces which disturb the sea. (c) As the Harris-Sterneck eddies are shown to be generally contrary to pure mathematical theory for free waves in the two terrestrial hemispheres the theory of the tides as local phenomena utterly collapses and disappears from the sight of philosophers. IX. An Outline of the Newcomb-Hough Theory of the Yielding of the Earth s Solid Mass in the Variation of Latitude We come now to the presentation of...
