Bartlet Press. Paperback. Book Condition: New. Paperback. 136 pages. Dimensions: 8.4in. x 5.4in. x 0.3in. AN ELEMENTARY TREATISE ON THE LUNAR THEORY, A BRIEF SKETCH OF THE HISTORY OF THE PROBLEM BEFORE NEWTON. BY HUGH GODFRAY, MA. OF ST. JOKNS OOLLKUII, CAMBRIDGE, LATE MATHEMATICAL LECTURER AT PEMBROKE COLLEGE. FOURTH EDITION. PREFACE TO THE FIRST EDITION. OF all the celestial bodies whose motions have formed the subject of the investigations of astronomers, the Moon has always been regarded as that which presents the greatest difficulties, on account of the number of inequalities to which it is subject but the frequent and important applications of the results render the Lunar Problem one of the highest interest, and we find that it has occupied the attention of the most celebrated astronomers from the earliest times. Newtons discovery of Universal Gravitation, suggested, it is supposed, by a rough consideration of the motions of the Moon, led him naturally to examine its application to a more severe explanation of her disturbances and his Eleventh Section is the first attempt at a-theoretical investigation of the Lunar inequalities. The results he obtained were found to agree very nearly with those determined by observation, and afforded a remarkable confirmation of the truth of his great principle but the geometrical methods which he had adopted seem inadequate to so complicated a theory, and recourse has been had to analysis for a complete determination of the disturbances, and for a knowledge of the true orbit. VI PEFACE. The following pages will, it is hoped, form a proper introduction to more recondite works on the subject the difficulties which a person entering upon this study is most likely to stumble at have been dwelt considerable length, and though different methods of investigation have been employed by different astronomers, the difficulties met with...
